5               **ABSTRACT OF THE INVENTION**

6               A personal optical viewer enables a person to view images of how the person looks  
7       wearing an accessory and compare images of how the customer looks wearing different  
8       accessories. A seller provides an accessory to a person. A capturing device captures a  
9       photograph or a video of the person and stores the image in a memory device. The personal  
10      optical viewer displays each image to the person and the person chooses which images to  
11      keep, reject, delete, or compare. The personal optical viewer replaces rejected images with  
12      other images stored in the memory device, and when the stored images have been exhausted  
13      the personal optical viewer automatically enlarges the remaining displayed images.
